Summary — Staff Software Engineer for Android with 7 years of experience (4+ years at Google) building high performance, user focused mobile apps. Expertise in Jetpack Compose, MVVM, and scalable architectures, with proven success in leading teams, mentoring developers, and modernizing large scale codebases. Passionate about building impactful apps with delightful UI that serves millions of users worldwide.

Skills

Languages Kotlin, Java, Python, JavaScript, Typescript, Swift, Dart

IDEs Android Studio, VSCode, PyCharm, XCode

Android Jetpack Compose, Retrofit, RoomDB, Dagger-Hilt, MVVM, Android SDK, Clean Architecture, Firebase, RxJava, Coroutines

Testing JUnit, Mockito, Espresso, Roboelectric, Screenshot Testing, Compose Testing

Other VCS (Git, Gerrit), Flask, MongoDB, KMP, CMP, ReactJs, NextJs, Flutter

Soft Skills Public Speaking, Communication, Team Management & Leadership

Experience

OKX May 2026 – Current

Staff Software Engineer (Android)

- Working OKX's Web3 Android team, closely working on both DeFi and CeFi.
- Working the initiative of AI adoption for day to day developer productivity across both Android and iOS teams.
- Working on Crypto Wallets, Rust migrations for Logic Layer and Networking Layer, and E2E tests using Python.
- **Tech stack used** - Kotlin, Jetpack Compose, RoomDB, MVVM, Coroutines, Rust, Python3, Credential Manager, Dagger-Hilt, Web3, Crypto Wallets etc.

Google Oct 2021 – Apr 2026

Senior Software Engineer (Android)

- Spearheaded the development of Android features (13–16), including Per-App Language Preferences, Picture-in-Picture updates, and Passkeys, improving security and usability for millions of users.
- Migrated legacy codebases to Jetpack Compose following Modern Android Development best practices, and enhancing modularity, scalability, and testability.
- Architected automated testing for Compose. Worked on Unit Tests, Screenshot Tests, and end-to-end Compose Tests.
- Enhanced UX with Figma-driven redesigns, aligning app's UI with Material3 standards.
- Led and mentored junior developers, improving code quality through structured reviews and constant guidance.
- Contributed to core AndroidX SDKs like *androidx.credentials* and *androidx.providerevents* to improve the upcoming features in the domain of Identity and Authentication via Credential Manager
- **Tech stack used** - Kotlin, Jetpack Compose, RoomDB, MVVM, Coroutines, Media3, CameraX, Credential Manager, Dagger-Hilt, JUnit, Compose Tests, Instrumentation Tests, Flows, UseCases, Repository Pattern, etc.

Grab May 2021 – Oct 2021

Software Engineer (Android)

- Worked on Grab's finance module, which was responsible for managing all of the payments on the GrabTaxi app.
- Worked on implementing new features, bug fixes and writing Unit Tests, and improved code coverage by 7%
- Implemented new screens for the app using the given Figma files
- **Tech stack used** - Kotlin, RxJava, Coroutines, LiveData, Views, ViewBinding, DataBinding, Mockito, JUnit, Dagger-2.

Shipsy Aug 2019 – May 2021

Software Engineer (Android)

Project: Rider App

- Worked on an app for riders to track order details and consignment assignments.
- Migrated the app to AndroidX, then migrated the app from Java to Kotlin
- Worked on features like location tracking, Label Printing, Consignment Booking, Booking Management,

- Also worked on adding new features to the app, and bug fixes in the existing flows
- Collaborated with the Backend and QA teams for the developments, and managed team of 3 Android Developers to create 2 apps from scratch
- Architected the 2 apps to be modular enough to accomodate new features with minimum changes to the current files.
- **Tech stack used** - Java, Kotlin, Views, DataBinding, ViewBinding, Mockito, Espresso, SQLite, CustomViews

Siemens

Jan 2019 – Jun 2019

Software Engineering Intern (Android)

Project: Vehicle Counter App

- Built an app from scratch which implemented a Deep Learning model to identify, track and count vehicles from the device's live camera feed.
- Implement Number plate recognition to detect individual contributions to Air Pollution for an Area
- Used YOLOv3 model with updated final layer for object detection using IoU method
- **Tech stack used** - TensorflowLite, Java, Views, XML, IoU, Python and Deep Learning, TensorflowLite, Keras, PyTorch, Tensorflow.

Education

Indian Institute of Information Technology (IIIT), Vadodara

July 2015 - July 2019

Bachelor of Technology (B.Tech) in Computer Science

Certifications

- React - The Complete Guide 2025 (incl. Next.js, Redux), Udemy (2025)
- Beginner to Advanced guide for Flutter 2025, Udemy (2025)
- Dependency Injection in Android with Dagger and Hilt, Udemy (2024)
- (Jetpack, Architecture & More) Advanced Android Bootcamp, Udemy (2024)
- Android MVVM Architecture complete course, Udemy (2024)
- State of the Art Android App Development in Kotlin, Udemy (2020)
- Deep Learning Nanodegree, Udacity 2018

Other Experiences

GeeksForGeeks

June 2024 – Aug 2024

Course Instructor for Advance Android Development Course

- Led a batch of 40 students which consisted of college students as well as experienced professionals
- Created a 3 month long learning path for students, starting from basics of Kotlin to Jetpack Compose and MVVM.
- Taught the concepts of Testing, Coroutines, Clean Architecture, MVVM, LiveData, Animations, Firebase, and Jetpack Compose

Udacity

Apr 2022 – Feb 2024

Student Mentor and Project Reviewer for Deep Learning Nanodegree

- Mentored 8 students during their course tenure of Deep Learning
- Helped the students carve a learning path and routine. Assisted them with their doubts and queries, and unblocked them wherever they were blocked
- Reviewed project submissions for ANN, CNN, RNN, GAN and RL for their correctness based on the Udacity specified rubrics.
- Specifically focused on Python neural networks

Personal Projects

Nutrak (Concept App)

June 2024 – Aug 2024

 [Github Link](#)

- In a given time frame of 5 days, built this concept app of Nutrition Tracking, using purely Jetpack Compose and MVVM architecture.
- The app's idea is to take an image of a food item, send it to backend to run an image processing model, and then fetch nutrients data corresponding to the captured image.
- Used tech stack of Kotlin, Jetpack Compose, MVVM, StateFlows, Custom Views (Using Jetpack Compose Canvas, Modifiers and Draw), and Coroutines.
- Also implemented Light and Dark themes, Navigation Compose, and SysUI features like Edge2Edge and Splashscreens.
